About Us

We are leading container and modular buildings manufacturer in the region. Proudly producing an annual average of 2500 separate modular units.

Having in Srebrenica a production hall of 2500m² and an always ready warehouse of 12000m² for storing finished products, we are able to meet the most complex requests and also create the largest modular buildings in the region.

01

Year after year we achieve better and better results as well as the increasing quality of products as shown by our constant growth.

Our Products

Containers are easily placeable objects which are even easier to transport from one spot to another. They serve different needs and have different purposes!

Our models are quick to set up, easy to transport and assemble, and are well isolated - A multi-purpose, ideal and simple solution for all your needs. Can be residential, office, sanitary, construction, as guardhouses, and many others. Most importantly: we make them based on the customer's desire and request.

02

The containers are delivered fully functional: with electrical wiring and sanitary equipment already installed.

Your only obligation is to prepare the hard surface on which we will place the container and connect the containers to the electrical or water supply via the pre-installed connections.

Construction

Small office

Storage containers

Temporary Placement

As a general concern on a construction site, it is necessary to resolve the issue of accommodation for workers, having a warehouse, a dining room or a sanitary block, etc.

The most economical and comfortable solution is the procurement and placement of construction containers.

In addition to housing workers, containers on construction sites can be installed for the needs of the office, dining room, toilets & showers, warehouse space.

03

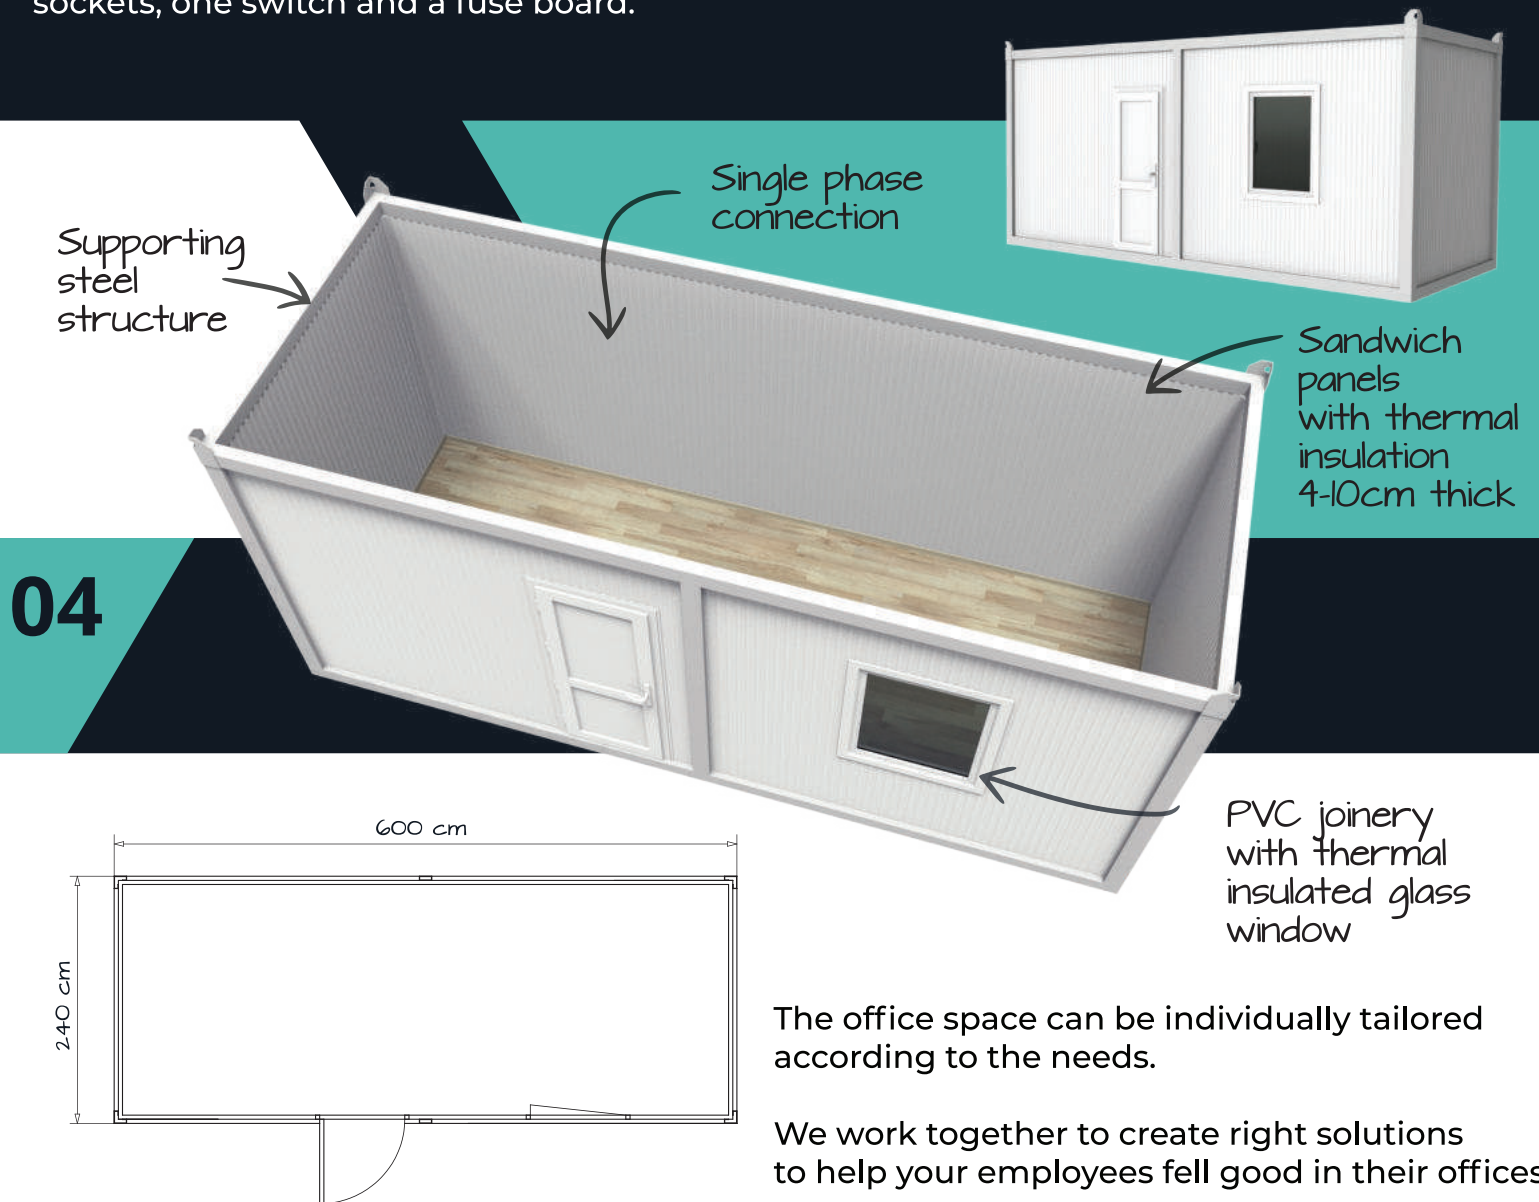

Connected models

Basic Model

Mounting container office occupies a surface of 14,4 m², dimensions are 6m x 2,4m. The container has PVC joinery, one door with dimensions 90cm x 200cm and a window with dimensions 100cm x 120cm. On the floor is an OSB board, over it is thermal insulation foil and finished laminate flooring 7mm thick.

The inner part of the container has the electrical installation, consisting of LED lighting, two sockets, one switch and a fuse board.
